

Dear valued patient,

I wanted to take a moment to send a letter to you updating you to some advancements within our dental practice. Recently at the annual Chicago Midwinter Meeting 2018 I have completed my laser dentistry certification course.

The course was extremely informative and taught by renowned laser dentistry expert Dr. Robert Convissar who has published numerous scientific articles on laser use in dentistry.

I am extremely excited to bring this technology and treatment modality into our practice. We currently are utilizing a soft tissue laser to allow us to treat more conditions than we were capable of before.

With a soft tissue laser we are able to treat and manage cold sores, canker sores, tongue ties, gummy smiles, gum overgrowth, and problematic frenum attachments as well as other conditions.

The best part about using a laser to treat these issues is that in the majority of the cases sutures are not needed, post operative discomfort is minimal, and it is overall a rather painless procedure.

The best part about using a laser to treat these issues is minimal post-operative discomfort, relatively painless procedures and usually no need for stitches afterward.

I hope this message finds you well and I look forward to seeing you at your next appointment.

Sincerely,

A handwritten signature in black ink that reads "Marco V. Colella DMD". The signature is written in a cursive, flowing style.
